Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

NAMES AND LABELS

- Buttons do not have an accessible name
- Image elements do not have [alt] attributes
- Links do not have a discernible name

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, such as a screen reader.

CONTRAST

- ▲ Background and foreground colours do not have a sufficient contrast ratio.
- ▲ Links rely on colour to be distinguishable.

These are opportunities to improve the legibility of your content.

BEST PRACTICES

- ▲ Touch targets do not have sufficient size or spacing.

These items highlight common accessibility best practices.

NAVIGATION

- ▲ Heading elements are not in a sequentially-descending order

These are opportunities to improve keyboard navigation in your application.

TABLES AND LISTS

- `<th>` elements and elements with `[role="columnheader"/"rowheader"]` have data cells they describe.

These are opportunities to improve the experience of reading tabular or list data using assistive technology, like a screen reader.

SEO

These checks ensure that your page is following basic search engine optimisation advice. There are many additional factors that Lighthouse does not score here that may affect your search ranking, including performance on [Core Web Vitals](#). [Learn more about Google Search essentials](#).

CONTENT BEST PRACTICES

▲ Links do not have descriptive text — 28 links found

▲ Image elements do not have [alt] attributes

Format your HTML in a way that enables crawlers to better understand your app's content.

CRAWLING AND INDEXING

▲ Links are not crawlable

To appear in search results, crawlers need access to your app.
